

X Infotech Mobile Enrolment Kit

X Infotech Mobile Enrolment Kit is fully compliant with the latest security standards and is designed to ensure immediate operation (open + start working) with 8 hours+ battery lifetime.

FEATURES

- Mobile Kit is well thought for difficult environments
- Mobile Kit is protected against splashes and penetration of dust
- Mobile Kit is easy to handle thanks to its sized wheels
- Mobile Kit is with an outside power supply
- The devices are protected by high density foams
- The Mobile Kits are designed to be stackable

X Infotech Enrolment & Mobile Kit can be customized according to specific customer requirements

ENROLMENT

X Infotech Enrolment is a software solution for capturing customer data – both demographic and biometric data (fingerprints, facial image and handwritten signature).

The comprehensive solution supports relevant customer data collection for financial and non-financial card product issuance. It is also used to enrol customers for biometric authentication services.

The efficiency of a biometric system entirely depends on the quality of the biometric data, X Infotech offers an integrated quality control component to capture high-quality biometric data in line with the industry standards and the best practices.

FEATURES

- Scalable enrolment to adjust the type of data captured and ensure compatibility with different biometric systems.
- Effective process control to lower the risk of human error (automated biometrics quality validation).
- Highly secured environment with data encryption and communication via secured communication channels.
- Flexible integration with a central application management system for data synchronization, validation and export.
- Vendor independent platform to give greater flexibility when selecting hardware.
